

DID YOU KNOW? A Few Facts About Vaccines

Did you know that

- in 48 states your child does not have to be vaccinated to attend public school?
- if a doctor threatens to call CPS if you refuse to vaccinate, the doctor may be breaking the law?
- the recent outbreaks of pertussis (whooping cough) have occurred mostly in people who were fully vaccinated?
- the vaccine for pertussis appears to be causing the increase in whooping cough?
- if you follow the CDC's childhood vaccine schedule, your child will be injected with 115 vaccine antigens from birth to 2 years?
- there has never been a single study investigating the safety or efficacy of the childhood schedule?
- some vaccines contain the DNA of aborted human fetuses (human babies), and others contain DNA of animals such as cows, chickens, pigs, mice, monkeys and insects?
- some vaccines still contain mercury, which is the second-most toxic substance on earth?
- vaccines contain neurotoxins such as aluminum, formaldehyde and polysorbate 80?
- when you receive a vaccine that contains a live virus you are contagious to others and they can get the disease from you?
- vaccines are the only medical procedure applied to 100% of the population, without regard to whether or not some children cannot handle them or may be more susceptible to serious vaccine-injury?
- there is a reporting system for vaccine-reactions and it contains thousands of reports of serious adverse reactions, including deaths from vaccines?
- the U.S. Government has paid out more than 2 Billion Dollars to parents whose children have been seriously harmed or killed by vaccines?
- you cannot sue a vaccine manufacturer because they are protected from liability by the United States government?
- you can obtain the vaccine inserts and read all the information about the risks before you make a decision about vaccinating?

Did you know that when asked, parents of vaccine-injured children say:

"If I could go back and do it again, I would not vaccinate."

"I wish someone had told me about the risks before I vaccinated my child."

"I wish I had taken the time to research vaccines before I vaccinated my child."

**Did you know... You have the right to say "NO!" to vaccines?
You have the right to take your time, and to learn about vaccines before making a decision.**

Learn more. Educate BEFORE you vaccinate.
